

PORBIDO TRUCKING & HAULING SERVICE

Custom Transportation Management System (TMS) • Commercial Proposal

Target Client: Porbido Management Client Partner: Cargill Philippines, Inc. Document Type: Commercial Proposal (File 3 of 3)

1. Project Investment & Return on Investment (ROI)

The financial investment for developing and deploying the custom Transportation Management System (TMS) is structured into two modular phases. This allows **Porbido Trucking & Hauling Service** to launch core operations immediately while keeping initial upfront costs manageable.

Return on Investment (ROI) Justification

In our initial audit of just 3 sample trips, manual transcription typos resulted in **P151.90 of unbilled freight**. Across 8 trucks running dozens of monthly trips, manual typos and buried receipts cost tens of thousands of pesos annually. This system pays for itself by catching 100% of unbilled freight and streamlining administrative labor.

Phase 1: Core Operations & Error-Proof Billing System (MVP)

P45,000.00

Deliverables Included: Smart Dispatch Form, Dropdown Route Selectors, Strict TLO Validation Rules, Auto-Math Freight Calculation Engine, Driver Mobile POD Receipt Upload Queue, and Visual TLO Billing Kanban Board.

Phase 2: Financial Reconciliation & Rolling Ledger Expansion

P30,000.00

Deliverables Included: Rolling Driver Cash-on-Hand (COH) Settlement Ledger, Automatic COH Carry-Over Engine, Cargill Statement Reconciliation Matrix, and 1-Click Cargill PDF Statement Generator.

★ Complete Bundle Special (Phases 1 & 2 Combined Upfront)

P68,000.00 (Save P7,000)

Full end-to-end deployment including both operational dispatching, mobile POD queue, rolling driver COH settlements, and 1-click Cargill PDF statement exports.

2. Payment Structure & Deliverable Milestones

Payments are structured into three clear performance milestones (40/40/20 split) tied directly to verifiable software deliverables:

MILESTONE	TRIGGER / DELIVERABLE CHECKPOINT	SPLIT %	AMOUNT (PHASE 1 / BUNDLE)
1. Kickoff Deposit	Proposal signing, project initialization, and database setup.	40%	P18,000 / P27,200
2. Beta Review	Functional core system built; tested with sample Cargill billing data.	40%	P18,000 / P27,200
3. Final Handover	Production deployment, staff 1-on-1 training, and source code handover.	20%	P9,000 / P13,600

3. Development Timeline & Delivery Schedule (4-Week Sprint)

The deployment schedule for Phase 1 (MVP) spans **4 calendar weeks** from deposit clearance:

WEEK 1: DATABASE ARCHITECTURE & SMART DISPATCH HUB

Core Setup & Route Dropdown Engine

- Database schema setup for active 10-wheeler fleet (CCK 5273, NAK 2202, CAK 2693, CAO 3510) and registered drivers.
- Build staff dispatch form with pre-configured dropdown routes (`Subic → Pulilan`, `Pulilan → Iloilo`, `Cebu → Iloilo`) and duplicate TLO# validation.

WEEK 2: AUTO-MATH FREIGHT CALCULATION ENGINE

Pricing Engine & Tonnage Input Safeguards

- Implement automated freight math: $\text{Freight} = \text{Weight (Tons)} \times \text{Route Rate}$.
- Build tonnage sanity validation rules (10.00 to 40.00 tons) and re-route charge selectors (P3,600.00 re-route).

WEEK 3: DRIVER MOBILE POD QUEUE & VERIFICATION BOARD

Mobile Receipt Capture & Admin Approval Queue

- Develop mobile camera upload page for drivers to snap signed Delivery Receipts and weighbridge tickets.
- Build administrative review queue to mark receipts as "Approved" or "Flagged (Blurry)".

WEEK 4: ACCEPTANCE TESTING, STAFF TRAINING & GO-LIVE!

UAT & Production Deployment

- Import historical Cargill billing summary data to conduct end-to-end User Acceptance Testing (UAT).
- Conduct 1-on-1 training session with Porbido administrative staff.
- **Phase 1 Official Production Go-Live!**

4. Warranty, Support & Maintenance Terms

30-Day Post-Launch Warranty (Free)

Includes **30 calendar days of complimentary technical warranty support** following production go-live. Covers bug fixes, formula tweaks, database adjustments, and administrative assistance.

Optional Monthly Maintenance Package (P3,500 / month)

Following the 30-day warranty, Porbido may opt for an ongoing technical SLA agreement covering:

- Cloud hosting management, security patches, and automated daily database backups.
- Priority technical support and minor feature updates.
